App Security Score Calculation

Every app is given an ideal score of 100 to begin with.

For every findings with severity **high** we reduce 15 from the score.

For every findings with severity **warning** we reduce 10 from the score.

For every findings with severity **good** we add 5 to the score.

If the calculated score is greater than 100, then the app security score is considered as 100.

And if the calculated score is less than 0, then the app security score is considered as 10.

Risk Calculation

| APP SECURITY SCORE | RISK |
|--------------------|----------|
| 0 - 15 | CRITICAL |
| 16 - 40 | HIGH |
| 41 - 70 | MEDIUM |
| 71 - 100 | LOW |

Report Generated by - MobSF v3.1.8 Beta

Mobile Security Framework (MobSF) is an automated, all-in-one mobile application (Android/iOS/Windows) pen-testing, malware analysis and security assessment framework capable of performing static and dynamic analysis.
